DETAILED ACTION

Specification

The specification has been checked to the extent necessary to determine the presence of all possible minor errors. However, the applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections

Claim Rejections - 35 USC § 112

Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Correction or clarification is required.

In claim 1, it is unclear what the “resistance characteristics” on line 3 is, how the on-voltage can show this characteristics, if the recitation “on-voltage” on line 9 is additional “on-voltage” or further recitation of the previously claimed “on -voltage” on line 2, how the second resistance element can “generate a voltage since the resistance element is not a generating means, how the on-current can be “amplified” and how the recitation “second resistance element” is read on the preferred embodiment or seen on the drawings. In claims 2 and 7, the recitation “fixed potential” on line 2 is confusing because it is unclear if this is additional “potential or further recitation of the fixed potential” on line 4 of claim 1. The same is true for reciting “load circuit” on line 2 of claims 5 and 10.

In claim 3-4, it is unclear how the recitation “third switch” is read on the preferred embodiment or seen on the drawings, and how the gate signal can synchronize that of the main switch, and where the gate signal comes from. The same is true for claims 8-9.

The remaining claims are dependent from the above rejected claims and therefore also considered indefinite.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-10 are rejected under 35 USC 102 (e) as being anticipated by Sander (US 6,737,856).

Sander discloses in Figure 1 a circuit comprising:

- a main switch (T1S);
- a subsidiary switch (T3S);
- a first resistance element (T2S);
- a second resistance element (Z2S); and
- a load (Z1S).
